

GENETIC CERTIFICATE

Mrs Eva BENDOVA
Za Oborou 32

16900 Praha 6
Czech Republic

Name : **Blue River Aldito**

Breed : **American Staffordshire Terrier**

Identification Nu : **203 098 100 272 221**
Pedigree Nu :

Sex : **Male**
Date of birth : **08/08/09**

Sampler : **Veterinarian**
Dr Dagmak MINARIKOVA
(Praha 5, 15500, Czech Republic)
Sampler nu. : **4661**

Sampling date : 30/09/09
Sampling type : Cheek swab
Sample Nu : **194192**

Receipt date : 19/10/09
Case : 20558 / 10253 / 200905156 - 19/10/09
Reference : 19328 / 24556 / 40331
Test : 49995/36474
Result code : 28505

Cerebellar Ataxia

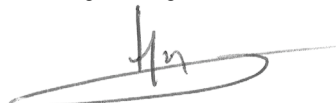

Result : **Heterozygous**

Tested disease : **Cerebellar Ataxia**

Interpretation : The animal has 1 normal copy and 1 defective copy of the implied gene in the Amstaff cerebellar ataxia. The animal will not develop the cerebellar ataxia. Statistically the animal will transmit the genetic anomaly to 50% of its progeny.

Result date : 27/10/09

Lina MUSELET
Engineer in genetics

Explanations :

This test is specific to the cerebellar ataxia in American Staffordshire Terrier (Amstaff), also named cerebellar cortical degeneration or neuronal ceroid lipofuscinosis (NCL). This neurological disorder is inherited as an autosomal recessive trait. This test relies on the detection of the normal form of the gene implied in the Amstaff cerebellar ataxia and the only defective form known up to date. The technology underlying this test is patented world-wide by INRA and ENVA. ANTAGENE has a exclusive international license to provide this test. This one can not be used to detect other forms of ataxia, nor other forms of inherited neurological diseases, nor other neurological ailments acquired during the life span of the animal.
